Information for Authors

Developmental Biology will publish in English original papers and review articles bear-
g on problems of development in the broadest sense; it will contain papers dealing with
mbryonic and postembryonic development, growth, regeneration, and tissue repair both
plants and animals. Papers dealing with reproductive biology and biology of aging that
veal fundamental mechanisms of general interest will also be published. The journal
rves as a meeting ground for studies on development that employ techniques from a
de range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morpho-
nesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and
ysiology. The journal aims for rapid publication; currently, publication time is 4–5
onths from date of acceptance.

Articles usually do not exceed 15,000 words and must be accompanied by an abstract
at gives, in 200 words or less, a synopsis of the work, including methods and results.
ief notes are 2500 words or less including the bibliography, which should contain only
references unless the abbreviated reference format is used (see directions under refer-
ces). The conventional format is: abstract, introduction, methods and materials, re-
lts, and discussion, but authors are encouraged to present their material in the most
gical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each
ould have a descriptive legend. Mark all figures with the author's name and address.

Line drawings should be made with India ink on smooth white paper. Do not submit
iginal line drawings larger in size than 13 × 10″; instead enclose smaller high quality
ints for the printer and for editorial use (two copies). Be sure lettering is uniform and
rge enough to allow for reduction and that the drawings when reduced will be either
lumn (2⅝″) or page (5½″) width. A figure that is submitted 5¼″ wide with lettering
mm high when reduced 50% will be a single column width. A figure submitted 11″ wide
th lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publication must be the actual size for reproduction and
refully labeled with letters 2–4 mm high. The page size of the journal must be consid-
ed and the following format observed.

(1) Column width figures are to be no wider than 2⅝″ or longer than 8″.

(2) Page size figures should be 5½″ wide and no longer than 8″.

(3) If the author decides to bleed the page (no margins), figure numbers should be no
oser than ¾″ to the margin to allow for trimming during binding of the journal. Figures
be bled must be 6⅞ × 10″ (submitted at 7 × 10¼″ to allow trimming).

Use unmounted figures where possible, but when several appear together as one plate,
ount them on cardboard or paper as close together as possible. The engraver will tool
in white lines between figures. Give magnification in the legend or indicate with a μ
arker on the photograph. Two pages of half-tone figures per article and ten pages of
lf-tone figures per review article will be published without cost to the author; a charge
$50 per page will be required for pages in excess of this number. The author will defray
e expense of colored plates.

Tables should be used to condense data referred to in the text. They should be typed
separate pages, numbered consecutively with Arabic numerals in order of mention
the text, and collected at the end of the manuscript. Give each table a concise, de-
riptive heading. Tables should be so composed that the content can be grasped with-
t reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) ha observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, etc. following the date to distinguish two or more works by the same author(s) in th same year (Doe, 1960a, b). Alternatively, references may be referred to by number: Do (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the biblio raphy alphabetically according to the surname of the author, using the following ord of items: author(s), date of publication, title of article or book, journal name, volum number, inclusive pages, publisher and city (for books only). Abbreviate titles of jou nals in accord with Chemical Abstracts' Service Source Index. Number the reference only if they are referred to by number in the text. For a brief note with more than twel references, references in the text must be cited by number and titles omitted in the bibl ography section. The same short form may be used with a full paper when an excessiv number of references are quoted.

Galley proof should be read carefully as no page proof will be sent to authors. Be ce tain figures are the correct size and correctly reproduced either as halftones or line dra ings and avoid excessive text changes that involve resetting. Reprints may be ordere when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbrevi tions. They must be typewritten, double-spaced, on one side of white bond paper abo $8\frac{1}{2} \times 11''$ in size, with the pages numbered consecutively. Indicate the address for gall proof. Include with full length articles a running headline not exceeding 35 letters an spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in co secutive order in the text and type them consecutively on a separate sheet. Acknow edgments and figure legends should also be typed, double-spaced, as separate section Two copies of the manuscript (original and carbon) and two copies of the figures shou be mailed to the new editor-in-chief Dr. Igor Dawid, Department of Embryology, Ca negie Institution of Washington, 115 West University Parkway, Baltimore, Maryla 21210.
